

Capstone Project Instructions- Step 3

Step 3: Plan Frontend Specifications

By this time you should have received mentor approval for Step 2. Please do not start this project step until you receive an approval from your mentor on the Capstone project proposal.

After your mentor approves of your capstone project proposal, You will plan the front-end control flow along with User Interface components. There are many ways to plan out your front-end control flow, it may be tedious but planning is important as it allows us to plan our logic and ensure our application works in our intended manner. A good logical flow will also allow us to (hopefully) write more maintainable and scalable code. With a good, planned control flow we can split up our workload into small, manageable tasks and use our time efficiently.

Let's take a look back at our example, a "Facebook for Dogs (and their Owners)" take a look at how the very basic control flow of an application like this can be planned out:

Example on How to Make a Flow Diagram:
